

MDaemon®

Email Server

Email, Collaboration, Instant Messaging, and More - Trusted by Businesses Worldwide

The MDaemon Email Server is trusted by businesses in over 140 countries around the world, providing reliable and secure email without expensive administration or high per-user costs. The Windows-based software requires almost no maintenance and offers email, webmail, collaboration, mobile device management, and more.

MDaemon Webmail - Web-Based Email, Collaboration & More

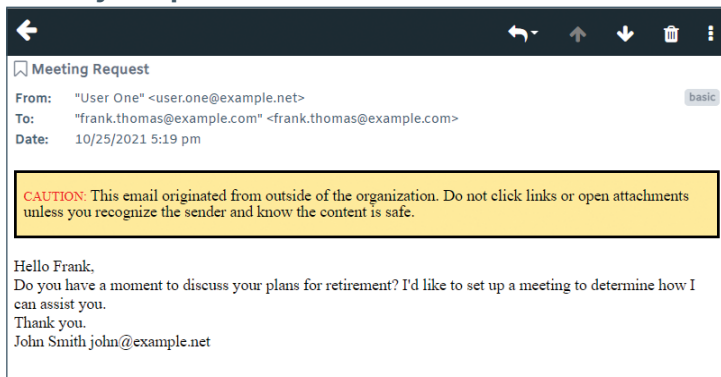

MDaemon Webmail provides seamless communication, file sharing, and collaboration - with integrated contacts, tasks, shared documents, voice memos, notes, and instant messaging.

Key Features and Benefits

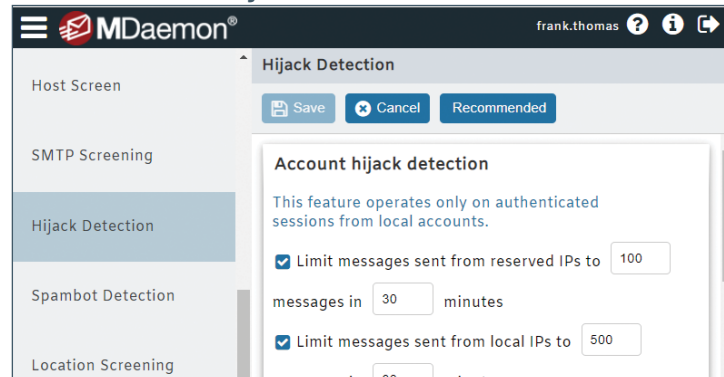

- Virtual, hosted, or on-premise deployment flexibility
- Intuitive mobile device management console to easily manage mobile devices. View, set and change mobile device policies (lock, remote wipe, etc.)
- Monitoring and alerts to notify the administrator of suspected breaches
- Strong email security and deliverability using DMARC, DKIM, SPF, spam filtering, spam learning, SSL/TLS, backscatter protection, spambot detection, and much more
- Security policy tools such as application passwords, password complexity settings and two-factor authentication
- Flexible outbound email management using custom delivery schedules and mail queues
- Centralized management of email client signatures
- Integrated web-based email (MDaemon Webmail) delivers full collaboration, message recall, attachment reminders, and more
- Public folder ticketing system using any email client
- Integrated instant messaging with support for popular IM clients
- Microsoft Outlook compatibility
- High availability multi-server clustering support for protection against service interruptions

Identify Suspicious Emails

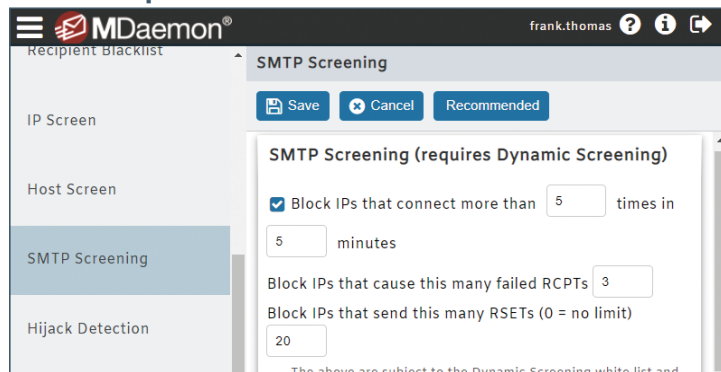

Message security warning, along with full “From” name and sending address helps users identify suspicious senders and spot possible phishing attacks.

Email Account Hijack Detection

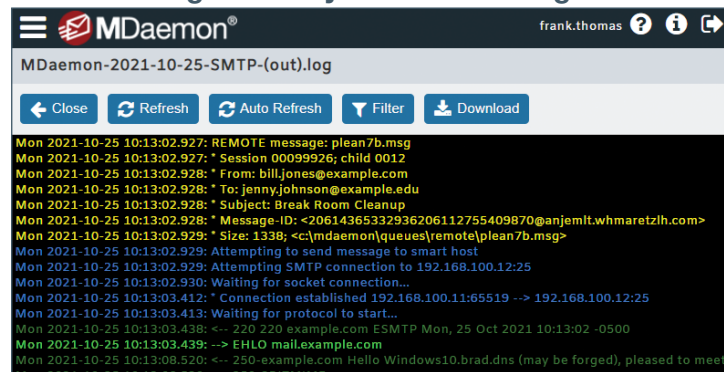

Prevent domain blacklisting by detecting and disabling an account that may have been compromised and used to send spam.

Block Suspicious Connection Activities

SMTP Screening helps prevent dynamic DoS, dictionary, and brute force attacks by blocking connections based on suspicious behavior.

Colorized Logs for Easy Troubleshooting

Email traffic logs are color-coded for easy troubleshooting and identification of server actions and processes.

System Requirements

- Microsoft Windows 2019|10|2016|8|2012|7|2008 R2
- CPU 800 MHz processor or higher (dual core CPU 2.4 GHz or higher recommended)
- 512 MB of RAM (1 GB recommended)
- Typical Hard disk space required: 200 MB, plus additional space for stored mail
- TCP/IP network protocol installed
- Internet or Intranet communication capabilities
